Moodle 5.0dev+ (Build: 20250326)

For information about this version of Moodle, please see the online [Release Notes](#)

Server checks

Name	Information	Report	Plugin	Status
database	mysql (8.0.37)	 version 8.4 is required and you are running 8.0.37 		
php_extension	sodium	 must be installed and enabled 		
php_extension	soap	 should be installed and enabled for best results  <div>Installing the optional SOAP extension is useful for web services and some plugins.</div>		
php_setting	opcache.enable	 PHP setting should be changed.  <div>PHP opcode caching improves performance and lowers memory requirements, OPcache extension is recommended and fully supported.</div>		

Other checks

Information	Report	Plugin	Status
max_input_vars	 this test must pass  <div>PHP setting max_input_vars must be at least 5000.</div>		

MultiPHP Manager

System PHP Version

The system default PHP version is set by the system administrator.
Any domain that is set to the *inherit* value indicates that it does not have its own PHP version explicitly set. Read more about [inherit](#).

PHP 8.1 (ea-php81)

Set PHP Version per Domain

Select the domains that you wish to change from the table, then apply a PHP version from the list.

Warning: PHP versions PHP 5.6, PHP 7.0, PHP 7.1, PHP 7.2, PHP 7.3, PHP 7.4, and PHP 8.0 are **deprecated**. We recommend that you update to a supported version of PHP. For more information, read our [PHP](#) documentation.

MultiPHP INI Editor

The MultiPHP INI editor writes to the .htaccess, .user.ini, and php.ini files. The system will only write a directive to a file if it is a valid directive for that file type. For more information, read our [MultiPHP INI Editor documentation](#).

Basic Mode

Editor Mode

Configure PHP INI basic settings

Select the home directory or a domain's document root to open the corresponding PHP configuration.

moodletesting.com.my

Path	/home/aicommy/public_html/moodletesting.com.my/php.ini	PHP Version	ea-php81	Domain	moodletesting.com.my
------	--	-------------	----------	--------	----------------------

PHP Directive	Information	Setting
allow_url_fopen	This option enables the URL-aware fopen wrappers that enable accessing URL object like files. Default wrappers are provided for the access of remote files using the ftp or http protocol, some extensions like zlib may register additional wrappers.	<div><div></div> Disabled</div>
display_errors	This determines whether errors should be printed to the screen as part of the output or if they should be hidden from the user.	<div><div></div> Disabled</div>
enable_dl	This directive is really only useful in the Apache module version of PHP. You can turn dynamic loading of PHP extensions with dl() on and off per virtual server or per directory. The main reason for turning dynamic loading off is security. With dynamic loading, it is possible to ignore all open_basedir restrictions. The default is to allow dynamic loading, except when using safe mode. This feature is deprecated, and will be removed at a future time.	<div><div></div> Disabled</div>
file_uploads	Whether or not to allow HTTP file uploads.	<div><div></div> Enabled</div>

```

Foundation

Themes :: theme_foundation

Maintained by  Gareth J Barnard

This is a Bootstrap theme that aims to be minimalistic and modern in look.

🔔 Latest release: 2 hari 📍 916 sites 📄 734 downloads ❤️ 40 fans

[Description](#)[Versions](#)[Stats](#)[Translations](#)Release **405.0.2**

Moodle 4.5

[Download](#)

code prechecks 2324 | 156

Introduction

This is a Bootstrap version 4 theme that aims to be different and yet at the same time have some traditions of the past. It does not extend the Boost theme but rather 'pull' the files it needs from it because that is where they are currently stored. No navigation drawer or docking has been implemented. However, you can collapse and expand blocks and put them in a 'drawer' region.
